Minds Advancing Medicine

FIND CAPITAL HEALTH ON

capitalhealth.org

At the Capital Health Vein Center, part of the Capital Health Heart & Vascular Institute, we help patients recognize varicose veins, spider veins, deep vein thrombosis (DVT), venous insufficiency and other vein disorders early and get the treatment necessary in order to avoid the persistent discomfort and unattractive appearance these disorders can cause.

Led by fellowship-trained vascular surgeons and an interventional radiologist, our center offers complete outpatient diagnosis and treatment for vein disorders in both men and women.

You can receive your diagnosis, as well as your consultation and treatment in two convenient locations in Hamilton and Hopewell. With convenience in mind, those with vein disorders receive the high quality, comprehensive care they deserve in either of our two beautiful, calming atmospheres.

And as a hospital-affiliated vein center, we can accomplish standard procedures and more complex cases, all without having to change your doctor or travelling far from home.

WHAT ARE VARICOSE VEINS AND HOW ARE THEY DIFFERENT FROM SPIDER VEINS?

The veins in our legs return blood flow to our heart. Valves within each vein allow the blood to move against gravity and go upwards towards our heart. When the valves do not work correctly, blood goes backward down the leg and enlarges the vein. These larger and more visible veins are called varicose veins. Spider veins are similar to varicose veins except that they are smaller.

IN ADDITION TO VARICOSE AND SPIDER VEINS, WHAT DOES THE CENTER TREAT?

Our physicians also diagnose and treat deep vein thrombosis (DVT) and venous insufficiency.

DVT occurs when a blood clot develops in a vein deep within the body. Not only can this condition cause swelling and pain, it can also be a serious threat to your health if the clot breaks off and travels through the bloodstream to the lungs.

Venous insufficiency occurs when leg veins do not allow blood to travel back to the heart, which can result in pain, swelling, and leg ulcers if left untreated. This can happen as a result of obesity, family history, pregnancy or those who have had surgery or severe injuries to their legs.

ARE VEIN TREATMENTS COVERED BY INSURANCE?

Insurance companies will cover vein treatments that are considered medically necessary. Office visits, vein stripping and ambulatory phlebectomy, vein ablation and saphenous vein laser treatment are usually covered by most insurances. If your procedure is not covered by your insurance, our staff will work with you and your insurance company in advance so that you're worry-free on the day of your treatment.
